

Doc.: A 8.2-02 Ver.: 02 Approved: J. Jindřich Date: 09.02.2026	Attachment LQM Quality policy Calibration laboratory	
---	---	---

In accordance with the provisions of ČSN EN ISO/IEC 17025:2018, the head of the calibration laboratory announces the following quality policy:

The calibration laboratory of PG electronic s.r.o. provides calibration services within its declared scope with an emphasis on high quality, professional competence, and reliability of results, while meeting customer requirements, agreed delivery times, and all relevant provisions of **ČSN EN ISO/IEC 17025:2018**.

Calibration activities are performed by competent personnel with demonstrable professional competence, which is ensured and maintained through qualification management, professional education, training, supervision, and regular competence evaluation. The management of the calibration laboratory creates conditions for the continuous development of employees' professional knowledge and skills.

The calibration laboratory performs its activities impartially, objectively, and independently. Risks to impartiality are systematically identified, assessed, and managed. The management of PG electronic s.r.o. does not influence calibration results and does not require any activities that could compromise the independence, objectivity, or professional judgment of calibration laboratory personnel.

Consistency of calibration activities is ensured through a maintained quality management system, unified and controlled calibration procedures, document control, internal audits, management reviews, and assurance of metrological traceability. Calibration results are provided in a manner that ensures they are technically valid, comparable, repeatable, and reliable in the long term.

The management of the calibration laboratory ensures adequate personnel and technical resources in accordance with the declared scope of the quality management system and creates conditions for the provision of services at a high professional level.

The calibration laboratory uses supplies and services exclusively from approved and evaluated suppliers.

The management of the calibration laboratory prevents any unauthorized interference that could compromise the quality or correctness of calibrations. Ensuring the validity of calibration results is binding for all calibration laboratory personnel.

All calibration laboratory personnel are required to comply with the documentation of the quality management system and, within their responsibilities, contribute to continual improvement of quality, professional competence, and prevention of recurrence of nonconforming work.

Head of the Calibration Laboratory:

Name and surname: Jindřich Jindřich
